- 05. Admin Page (UI and Others)
- 06. Loading Animation Provided

Section 1: Bugs and Issues

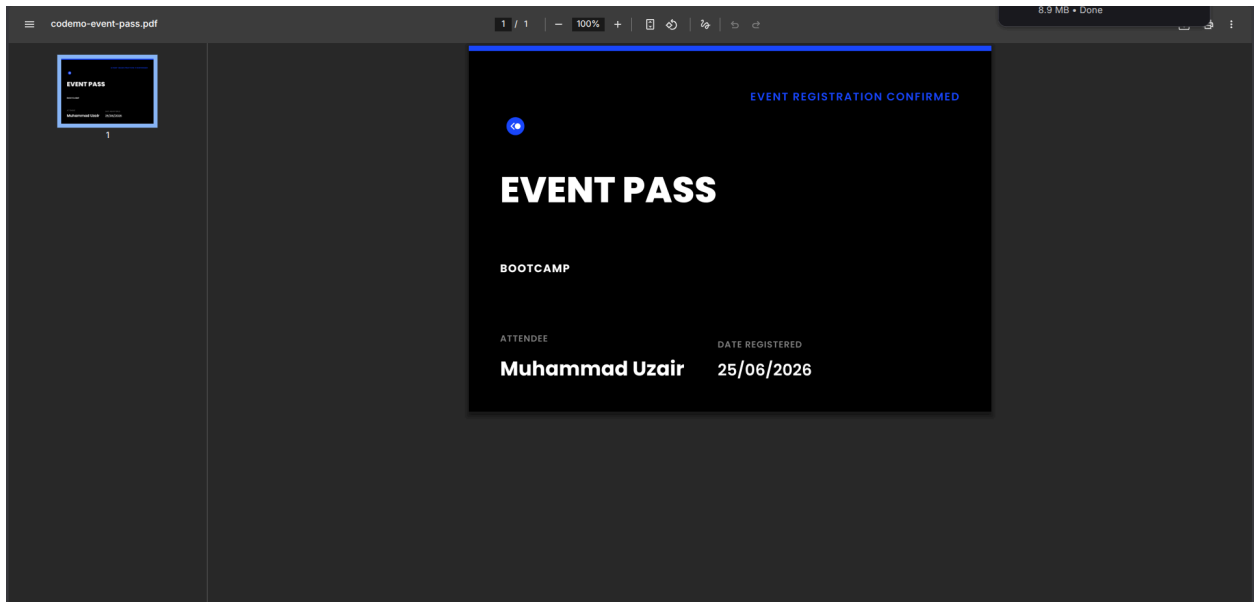

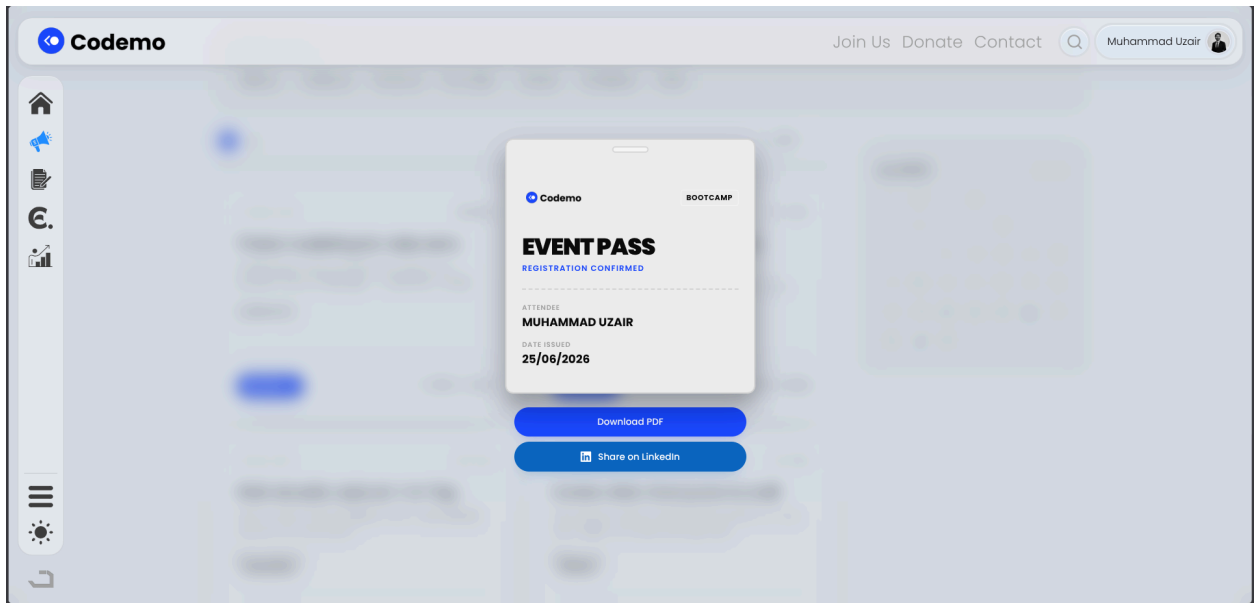

01. Dev Mode

I developed a page scope: codemoteams.org/dev in local mode as before `localhost/dev` for purpose of UI icons and text sizing and animation or text adjustment in which have feature that they directly push after changings to the main code they maybe conflict for security of website because its only for developer testing and they still access to every user I request to you add this dev directory as securely and make a role to access by user not every user can access only in admin panel where admin set the role of user to Dev so they will be updated. Mainly the goal is to not remove this feature but make access via in a secure way and better working the whole site with their dev features with a user Dev role based.

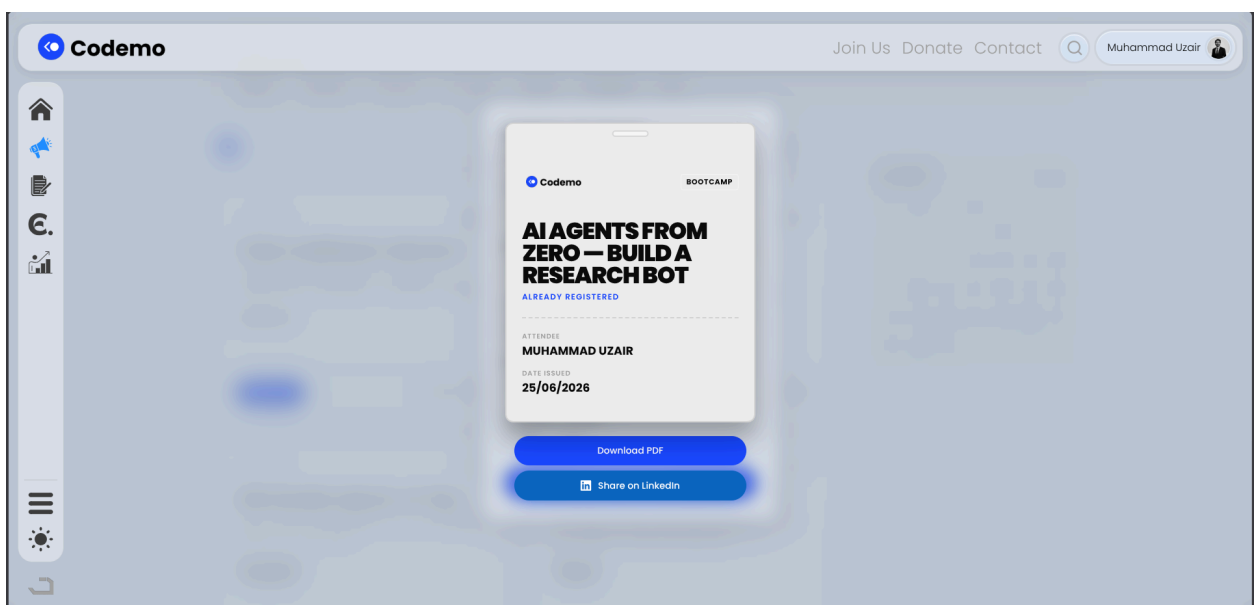

02. Events

In Events Page when I will enrolled in Event Pages as Register My Self they show me a Event Pass After Successful Registration But Currently the event pass first time don't fetch the Event Title Correctly After Successful of Registration I refresh and again Generate My Pass so they correctly fetch please fix this issues.

After I Press Again to Register then they Fixed My Pass Please Fix this Issue:

03. Security Report

Warnings (10)

- Consider adding the Cross-Origin-Opener-Policy response header
- Consider adding the Cross-Origin-Resource-Policy response header
- Consider adding the Cross-Origin-Embedder-Policy response header
- Add /.well-known/security.txt with disclosure contact info
- Consider Cloudflare, AWS WAF or similar to filter malicious traffic
- Sign DNS records to prevent spoofing and cache poisoning
- Add includeSubDomains to protect every subdomain
- Move from p=none to p=quarantine or p=reject when ready
- Publish a DKIM key so receivers can verify message signatures
- Add OpenGraph image for cleaner share previews

Informational (6)

- Lighthouse flagged performance as below recommended
- Enable OCSP stapling to speed up cert revocation checks
- Add preload to qualify for the HSTS preload list

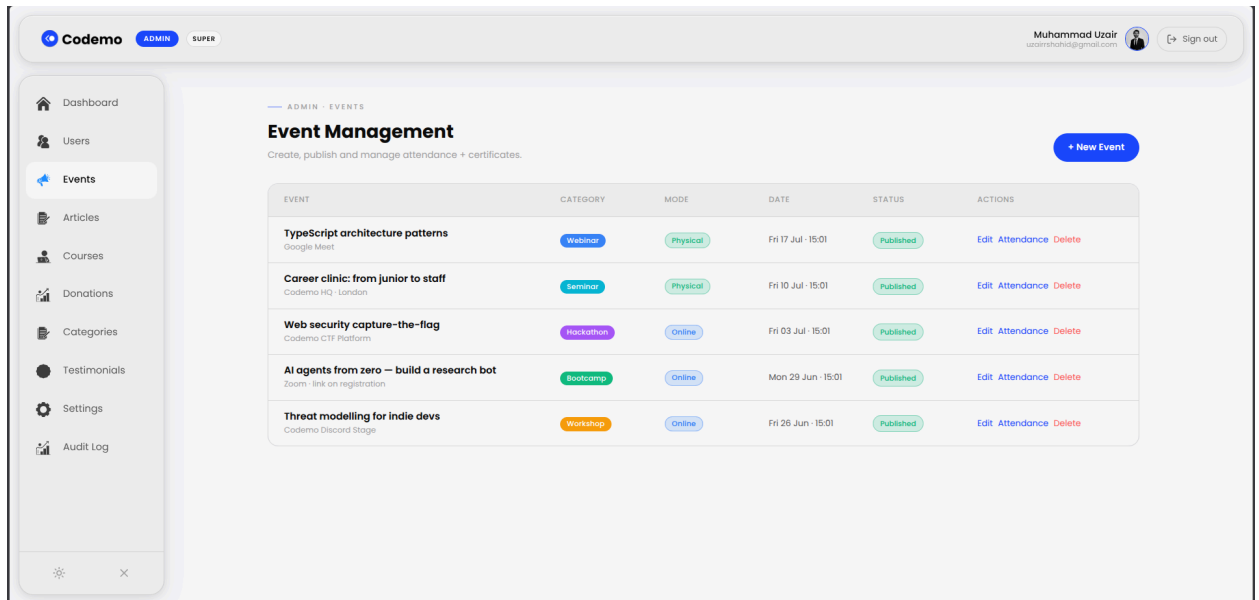

Section 2: Important Improvements

01. Admin Page (Eduto/Courses Section)

In **Eduto Page** when User Enrolled in Our Course they will generate a ID make sure the ID is unique generated for every user and must be shows a enrolled users in admin side their basic form detail I already told you their Name, Email, Number And City the Form of Eduto Originally the details Must be Saved as Shown By ID's in our Admin Side so we easy to confirm the Users who enrolled and verified, If User Clear from History their Enrollments in Eduto Section the Automatically Update as Clear in Our Admin Side to. So Make Sure this Working Well. In the last the course widget flash sale 15% off etc.. The Button UI looks over makes not match with eduto theme pack so please fix the Button UI of % OFF.

02. Admin Page (Events Section)

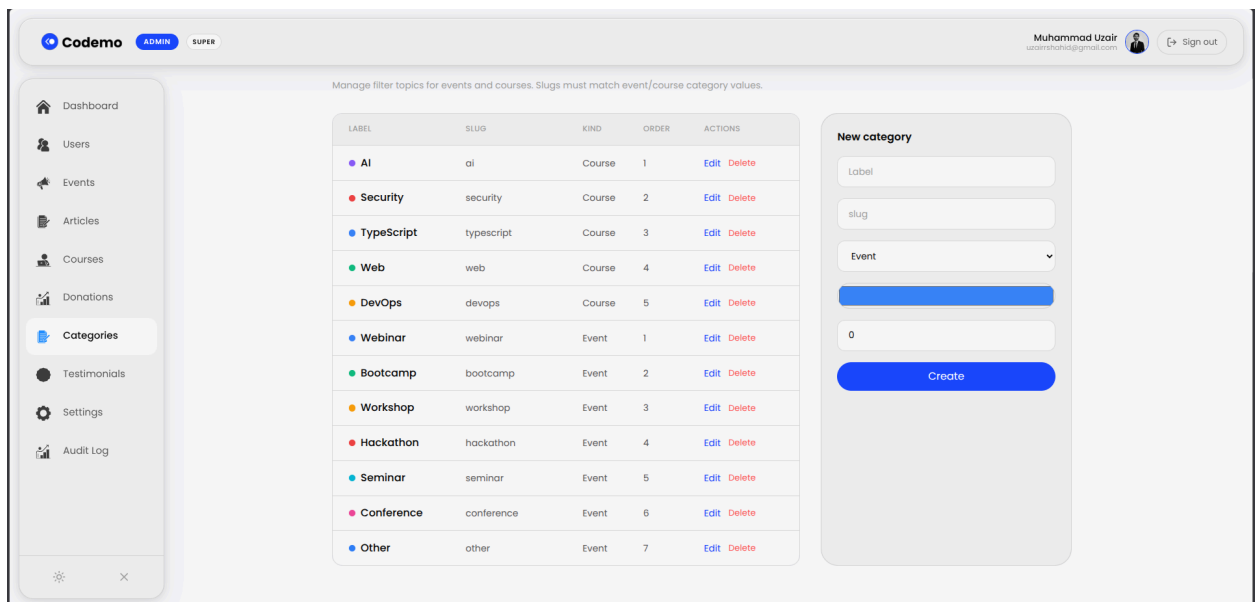

As you can see below in Screenshot the Attendance Option will become we don't need here because Our Details are redirected to google forms as preset in events page so we don't need here.

And when we Start Edit the form where it is generated in the events page or create a new event the option comes of **certificate enabled** or not as we do not need this option because for events or workshops the Pass will be generated automatically as our functionality.

03. Admin Page (Categories Section)

As I review the Categories Section the Idea is Good to make a separate view of Categories but still the Color selection was not logically good and it feels extra not require here so please remove the color selections over categories and its look better in simple way as our theme not feels doted and AI made Web UI.

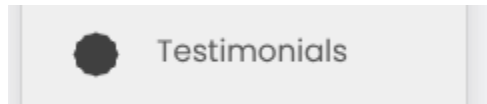

04. Admin Page (Home Customization)

Make a Home Customization Widgets Page in Admin Section where we have the option to add on resequence the widgets up and down.

- Select Eduto Course Library courses from existing courses we add on the Images as set as we used in Eduto Course Section And Details as well as fetch but the Editor Course Widget are as used currently in home section.
- Same for Events widget section in home we select our favourite events as we need to see in home as themes that are used in the home page.
- Make an option to customize user feedback or add on feedback through the admin side easily.
- Customize the Donation Accounts Details from Admin that are shown in home as well.
- Customized the Reach out Image from Admin Side in Last.

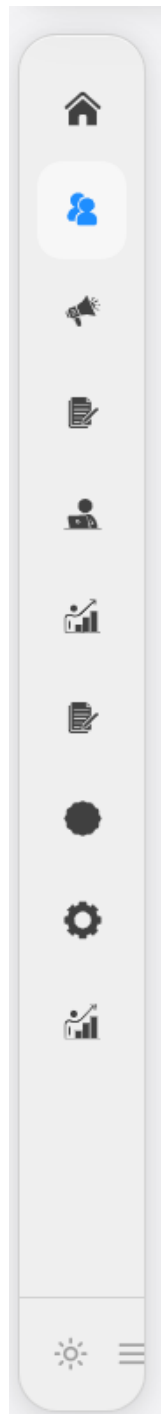

05. Admin Page (UI and Others)

1. As you see testimonials it looks extra not required here please remove it.

2. The extra role in super admin like Moderator, Admin Not Require Only New Role Add on “Dev” link with our dev directory page only admins and dev role person can access the Dev Role via codemoteams.org/dev
3. The option menu in dark theme has a color conflict when we select the role in dark menu the admin page option menu is not fetched with the right theme so make a reliable option menu.

4. In the Admin Page the Slide Bar has icon sizing conflicts please fix the UI.

06. Loading Animation Provided

I provide you with a loading animation with a report please download and add on the whole website where the loading is required to upload web elements and also set their size not extra large must look decent in both mobile and desktop view.
